A new science:

ASTRO-BIOLOGY

The science of LIFE

- Origin of life on Earth?
- Is the life we know a unique event in the universe?

5th Workshop of the Italian Astrobiology Society
Life in a Cosmic Context
15-17 September 2015, Trieste, Italy

ASTRONOMY

- Astrophysics & Astrochemistry

+ geology, ecology, planetary science...

Origin of life?

Spontaneous generation on
Early Earth?

Delivery of extraterrestrial
material through e.g. meteorites?

Search for organic molecules in space
The building blocks of life

How do we detect molecules?

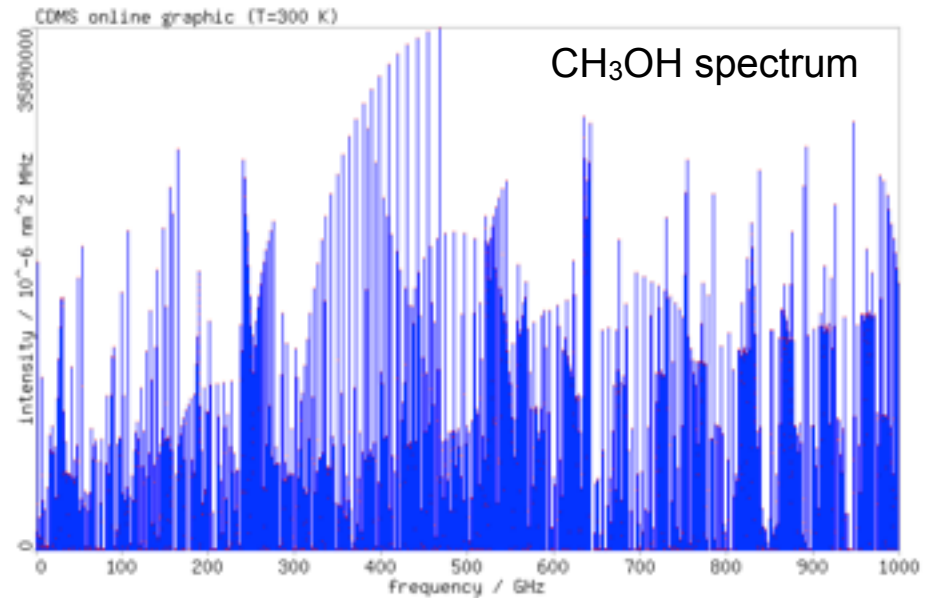

The fingerprints of interstellar molecules

- When molecules vibrate and rotate emit photons in the radio and (sub)millimeter spectrum.

- Each molecule produce a unique spectrum.

ALMA radiotelescopes (Chile)

- Ground based and space telescopes are able to detect these photons.

IDENTIFICATION OF COMPLEX ORGANIC MOLECULES IN THE SPACE

Detection of “complex” organic molecules (COMs)

Species	Name	Source	Species	Name
Hydrocarbons			N-Containing	
C ₂ H ₄	Ethene	circ	CH ₃ CN	Acetonitrile
HC ₄ H	Butadiyne	circ	CH ₃ NC	Methylisocyanide
H ₂ C ₄	Butatrienyldiene	circ, cc, lc	CH ₂ CNH	Keteneimine
C ₅ H	Pentadiynyl	circ, cc	HC ₃ NH ⁺	Prot. cyanoacetylene
CH ₃ C ₂ H	Propyne	cc, lc	C ₃ N	Cyanobutadiynyl
C ₆ H	Hexatriynyl	circ, cc, lc	HC ₄ N	Cyanopropynylidene
C ₆ H ⁻	Hexatriynyl ion	circ, cc, lc	CH ₃ NH ₂	Methylamine
H ₂ C ₆	Hexapentaenyldiene	circ, cc, lc	C ₂ H ₃ CN	Vinylecyanide
HC ₆ H	Triacetylene	circ	HC ₃ N	Cyanodiacetylene
C ₇ H	Heptatriynyl	circ, cc	CH ₃ C ₃ N	Methylcyanoacetylene
CH ₃ C ₄ H	Methyldiacetylene	cc	CH ₂ CCHCN	Cyanoallene
CH ₃ CHCH ₂	Propylene	cc	NH ₂ CH ₂ CN	Aminoacetonitrile
C ₈ H	Octatetraynyl	circ, cc	HC ₂ N	Cyanotriacetylene
C ₈ H ⁻	Octatetraynyl ion	circ, cc	C ₂ H ₃ CN	Propionitrile
CH ₃ C ₆ H	Methyltriacetylene	cc	CH ₃ C ₃ N	Methylcyanodiacetylene
C ₆ H ₆	Benzene	circ	HC ₉ N	Cyanotetraacetylene
O-Containing			C ₃ H ₃ CN	N-propyl cyanide
CH ₃ OH	Methanol	cc, hc, gc, of	HC ₁₁ N	Cyanopentaacetylene
HC ₂ CHO	Propynal	hc, gc	S-Containing	
c-C ₃ H ₂ O	Cyclopropenone	gc	CH ₃ SH	Methyl mercaptan
CH ₃ CHO	Acetaldehyde	cc, hc, gc	N,O-Containing	
C ₂ H ₃ OH	Vinyl alcohol	hc	NH ₂ CHO	Formamide
c-CH ₂ OCH ₂	Ethylene oxide	hc, gc	CH ₃ CONH ₂	Acetamide
HCOOCH ₃	Methyl formate	hc, gc, of		
CH ₃ COOH	Acetic acid	hc, gc		
HOCH ₂ CHO	Glycolaldehyde	hc, gc		
C ₂ H ₃ CHO	Propenal	hc, gc		
C ₂ H ₅ OH	Ethanol	hc, of		
CH ₃ OCH ₃	Methyl ether	hc, gc		
CH ₃ COCH ₃	Acetone	hc		
HOCH ₂ CH ₂ OH	Ethylene glycol	hc, gc		
C ₂ H ₅ CHO	Propanal	hc, gc		
HCOOC ₂ H ₅	Ethyl formate	hc		

First detections of “COMs” in space (1970):

CH₃OH (Methanol)

> 150 molecules detected
> 50 with 6 or more atoms

Herbst & van Dishoeck (2009)

Where do we look?

Cold molecular clouds
(without star formation)

Star-forming regions

- Galactic Center (extreme conditions)
- Hot cores (massive stars)
- Hot corinos (sun-like stars)

Viti's & Ceccarellis's talks

Circumstellar disks and
molecular outflows

Podio's & Codella's talks

Comets and meteorites (“in situ”)

OPEN QUESTIONS:

- Do they share the same molecular abundances?
- Is the chemistry similar despite of the different environments?

Let's start by "the simplest complex" ...

Glycolaldehyde (CH₂OHCHO)

Ethylene glycol (CH₂OH)₂

	Sugars	Sugar Alcohols	Sugar Acids	Dicarboxylic Sugar Acids	Deoxy Sugar Acids			
3C	$\begin{array}{c} \text{CH}_2\text{OH} \\ \\ \text{C}=\text{O} \\ \\ \text{CH}_2\text{OH} \end{array}$ Dihydroxyacetone	$\begin{array}{c} \text{CH}_2\text{OH} \\ \\ \text{H}-\text{C}-\text{OH} \\ \\ \text{CH}_2\text{OH} \end{array}$ Glycerol 160 nmol/g (100%)	$\begin{array}{c} \text{CO}_2\text{H} \\ \\ \text{H}-\text{C}-\text{OH} \\ \\ \text{CH}_2\text{OH} \end{array}$ Glycolic acid 80 nmol/g	—				
4C	—	$\begin{array}{c} \text{CH}_2\text{OH} \\ \\ \text{H}-\text{C}-\text{OH} \\ \\ \text{H}-\text{C}-\text{OH} \\ \\ \text{CH}_2\text{OH} \end{array}$ Erythritol & Threitol (1%)	$\begin{array}{c} \text{CO}_2\text{H} \\ \\ \text{H}-\text{C}-\text{OH} \\ \\ \text{H}-\text{C}-\text{OH} \\ \\ \text{CH}_2\text{OH} \end{array}$ Erythronic & Threonic acid (4nmol/g)	$\begin{array}{c} \text{CO}_2\text{H} \\ \\ \text{H}-\text{C}-\text{OH} \\ \\ \text{HO}-\text{C}-\text{H} \\ \\ \text{CO}_2\text{H} \end{array}$ Tartaric & Mesotartaric acid	$\begin{array}{c} \text{CO}_2\text{H} \\ \\ \text{H}_3\text{C}-\text{C}-\text{OH} \\ \\ \text{CH}_2\text{OH} \end{array}$ 2-Methyl glyceric acid	$\begin{array}{c} \text{CO}_2\text{H} \\ \\ \text{H}-\text{C}-\text{OH} \\ \\ \text{H}-\text{C}-\text{H} \\ \\ \text{CH}_2\text{OH} \end{array}$ 2, 4 Dihydroxy butyric acid	$\begin{array}{c} \text{CO}_2\text{H} \\ \\ \text{H}-\text{C}-\text{OH} \\ \\ \text{H}-\text{C}-\text{OH} \\ \\ \text{CH}_3 \end{array}$ 2, 3 Dihydroxy butyric acid (& diastereomer)	$\begin{array}{c} \text{CO}_2\text{H} \\ \\ \text{H}-\text{C}-\text{H} \\ \\ \text{H}-\text{C}-\text{OH} \\ \\ \text{CH}_2\text{OH} \end{array}$ 3, 4 Dihydroxy butyric acid

6C	*	$\begin{array}{c} \text{CH}_2\text{OH} \\ \\ \text{H}-\text{C}-\text{OH} \\ \\ \text{HO}-\text{C}-\text{H} \\ \\ \text{H}-\text{C}-\text{OH} \\ \\ \text{H}-\text{C}-\text{OH} \\ \\ \text{CH}_2\text{OH} \end{array}$ Glucitol & Isomers	$\begin{array}{c} \text{CO}_2\text{H} \\ \\ \text{H}-\text{C}-\text{OH} \\ \\ \text{HO}-\text{C}-\text{H} \\ \\ \text{H}-\text{C}-\text{OH} \\ \\ \text{H}-\text{C}-\text{OH} \\ \\ \text{CH}_2\text{OH} \end{array}$ Gluconic acid & Isomers	$\begin{array}{c} \text{CO}_2\text{H} \\ \\ \text{H}-\text{C}-\text{OH} \\ \\ \text{HO}-\text{C}-\text{H} \\ \\ \text{H}-\text{C}-\text{OH} \\ \\ \text{H}-\text{C}-\text{OH} \\ \\ \text{CO}_2\text{H} \end{array}$ Glucaric acid & Isomers	$\begin{array}{c} \text{CO}_2\text{H} \\ \\ \text{H}-\text{C}-\text{H} \\ \\ \text{H}-\text{C}-\text{OH} \\ \\ \text{H}-\text{C}-\text{OH} \\ \\ \text{H}-\text{C}-\text{OH} \\ \\ \text{CH}_2\text{OH} \end{array}$ 2-Deoxyhexonic acids	$\begin{array}{c} \text{CO}_2\text{H} \\ \\ \text{H}-\text{C}-\text{OH} \\ \\ \text{H}-\text{C}-\text{H} \\ \\ \text{H}-\text{C}-\text{OH} \\ \\ \text{H}-\text{C}-\text{OH} \\ \\ \text{CH}_2\text{OH} \end{array}$ 3-Deoxyhexonic acid		

Complex organic molecules detected in the Murchinson meteorite "in situ" (Cooper+01, Nature)

Glycolaldehyde (GA) (CH_2OHCHO)

- It is the simplest *sugar*.
- It can react with propenal (3-carbon sugar) to produce ribose, the central constituent of RNA.

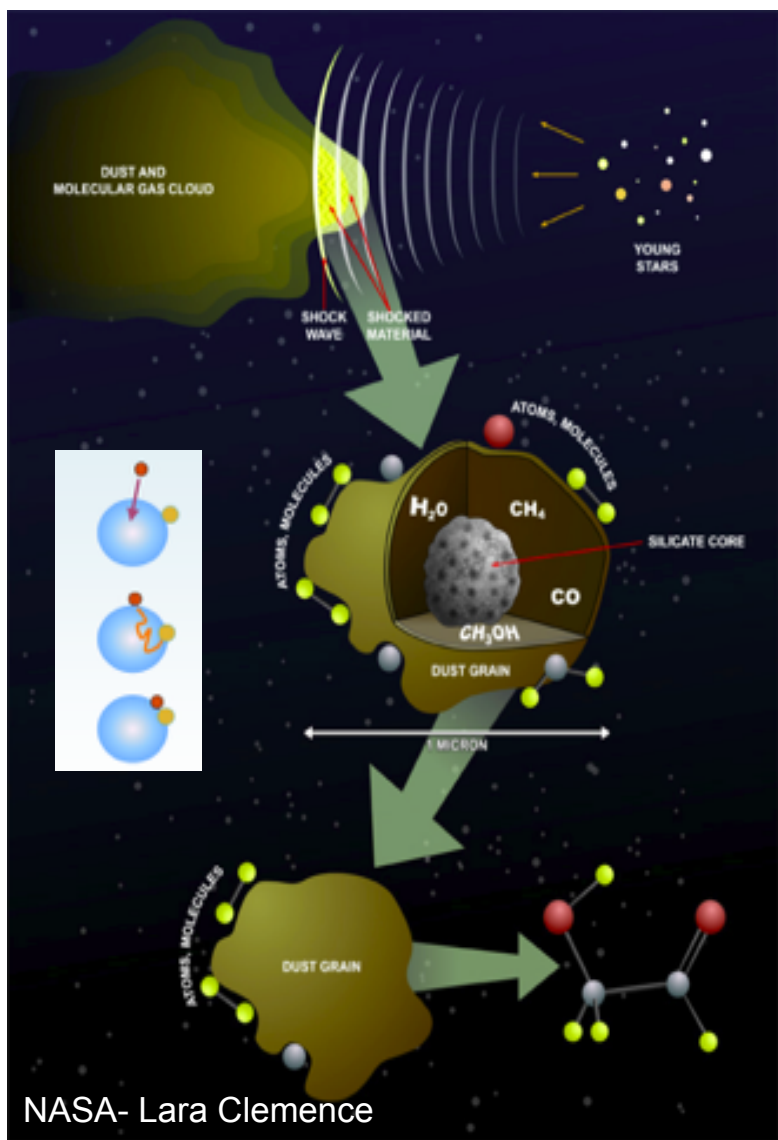

Ethylene glycol (EG) (CH_2OH)₂

- It is the simplest *sugar alcohol* (sugar + hydrogen atoms)
- It is the reduced alcohol of glycolaldehyde

**Important role in interstellar prebiotic chemistry
associated with sugar synthesis**

Hot molecular cores: a perfect laboratory for astrochemistry

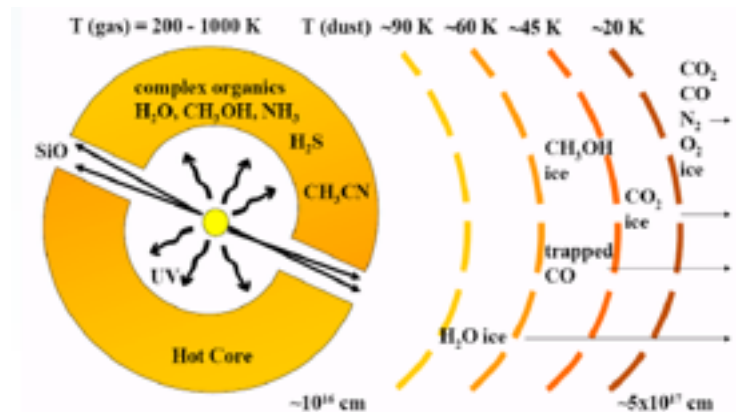

- Molecular environment surrounding massive stars ($M > 8 M_{\text{sun}}$)
- The radiation from the star evaporates the complex molecules from the grain mantles.
- Very rich chemistry.

OUR TARGET: G31.41+0.31 HOT CORE

Complex molecules already detected:

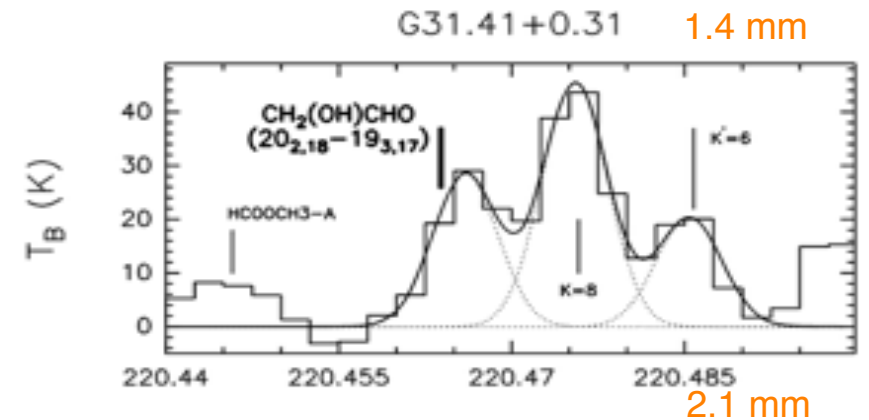

CH₃OH, CH₃CN, CH₃CHO, C₂H₅OH, C₂H₅CN, HCOOCH₃,
 CH₃OCHO, CH₃COCH₃... (e.g. Fontani+07, Beltrán+09)

Good candidate for the detection of GA and EG

Detection of glycolaldehyde in G31

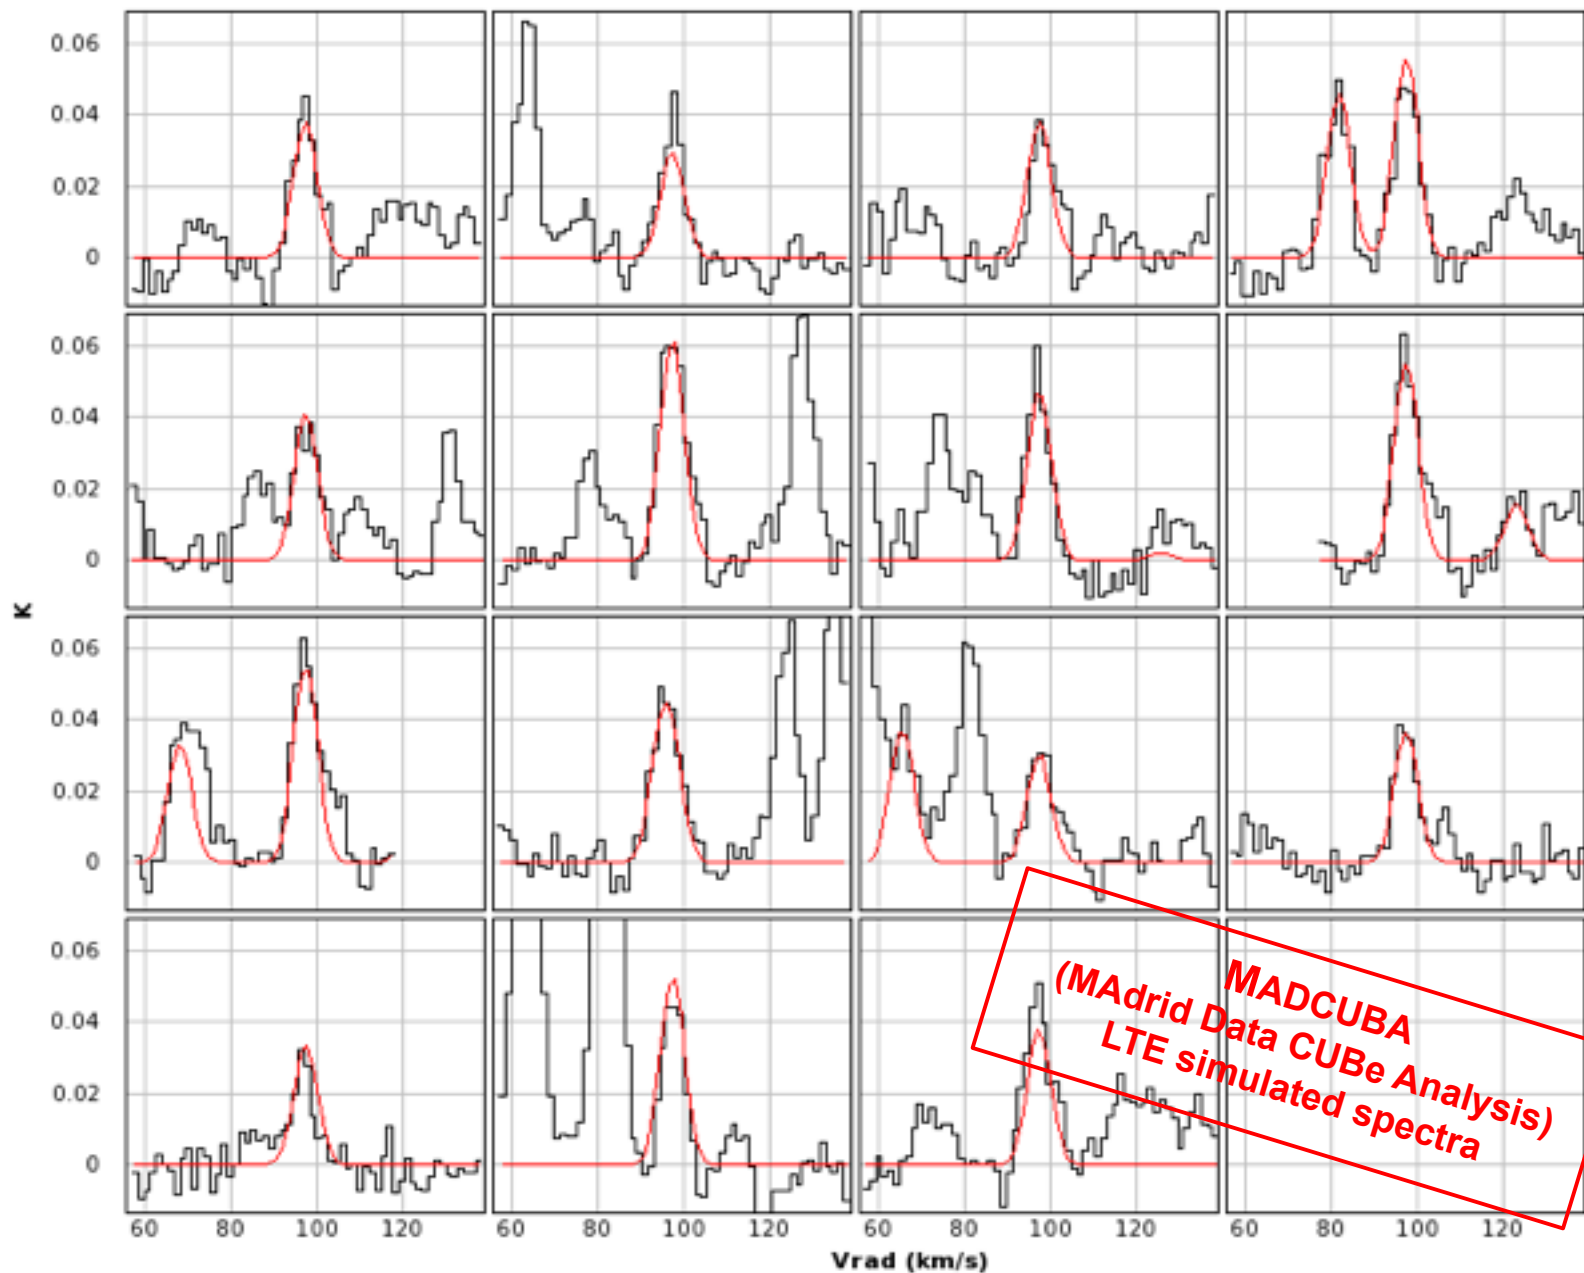

- First detection outside the Galactic Center by Beltrán et al. (2009)

Detection of ethylene glycol in G31

Up to 30 “clean” (not blended) lines

Rivilla et al, *in prep.*

Detection of ethylene glycol in G31

Submillimeter Array (SMA)

Rivilla et al, *in prep.*

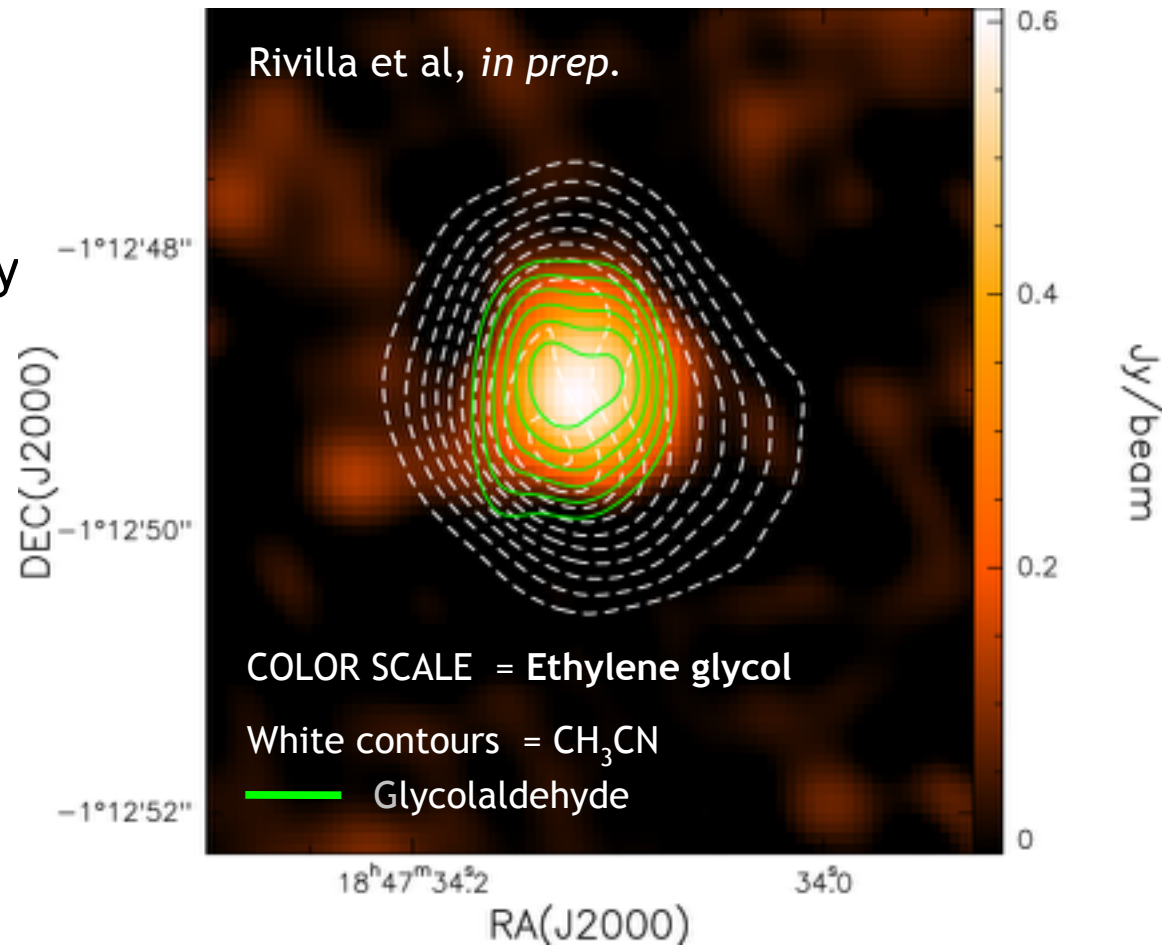

Spatial distribution of GA and EG

- Compact spatial distribution
- EG & GA: very similar morphology

Hint of common synthesis pathway
(species chemically related)

HOW GA & EG WERE FORMED?

GAME OF REACTIONS

— (F) Woods+13, Fedoseev+15

— (A) Sorrell+01, Woods+12

— (E) Charnley&Rogers+05

— Fedoseev+15

— (D) Beltrán+09,Woods+12

— Charnley&Rogers+05

— (B) Bennett&Kaiser07, Garrod+08, Butscher+15

GAME OF REACTIONS

Joint study is the only way to really understand how COMs are formed in the space

Chemical (+ physical) models

Observations: EG/GA ratio

Source	[EG/GA]
Hale-Bopp (comet)	>6
Lemmon (comet)	>3
Lovejov (comet)	>5
IRAS 16293-2422	1
NGC 1333 IRAS2A	5
NGC7129 FIRS2	2
SgrB2N	1.3
G31.41+0.31	3-5
Orion hot core	>10
W51e2	>16
G34.3+0.2	>6
G-0.02, G-0.11, G+0.693	1.2-1.6

EG/GA is rather different
between sources

$EG/GA > 1$

Do the differences arise from the **origin** (the grains) or are a consequence of **subsequent evolution**?

Chemical models and laboratory: EG/GA ratio

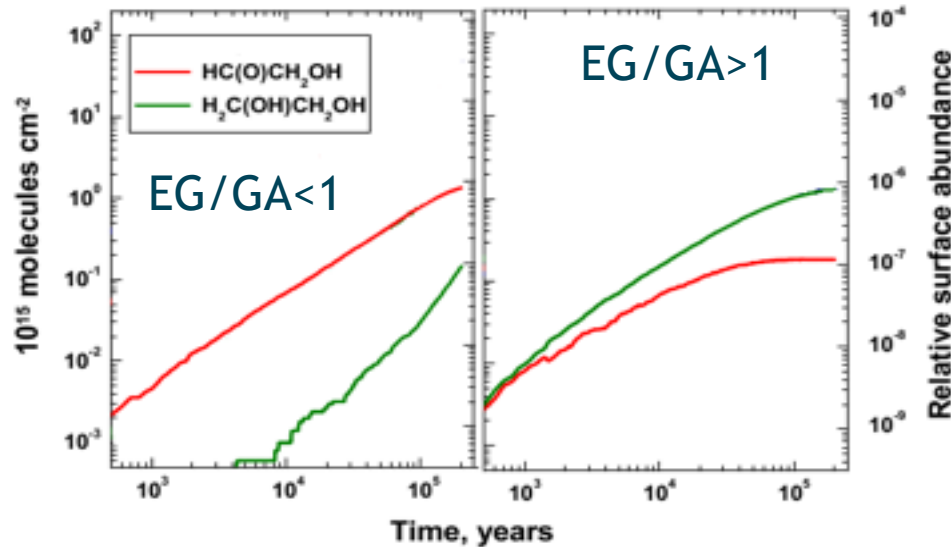

Fedoseev+15

Oberg+09

Different initial atom H density

Different compositions of the ices

CH ₃ OH:CO	EG/GA
Pure CH ₃ OH	> 10
1:10	< 0.25

- OTHER EXPLANATIONS:**
- Different destruction efficiency in the gas phase?
 - Different timescales produce different ratios (Garrod+08).

Observations & chemical models

Predictions from chemical models for the formation of glycolaldehyde (Woods+12,13):

DIAGNOSTIC DIAGRAM (from Woods+12,13 models)

- The 3 proposed routes predict different ratios of abundances

Determination of multiple abundances ratios involving **all the molecules in **a complete sample of regions****

Understanding the formation of astrobiological molecules in star-forming regions
